CamXchange - Read Me First

Please read these important notes before installation of AJA CamXchange software.

Installation Instructions

When installing the AJA software on your Mac OS computer, please follow these important steps:

- Ensure that your Mac OS computer is running OS X 10.8.2 (or later) and it is equipped with a Thunderbolt™ port.
- Install the NTV4 driver contained in the AJA CamXchange .dmg. You will be prompted to restart your computer after installation completes.
- Once your computer restarts, re-open the AJA CamXchange .dmg and copy the AJA CamXchange application to your Applications folder.
- The CamXchange software is now fully installed and ready for use.

Refer to the AJA CamXchange Installation and Operation Guide for I/O connections and application operational guidelines.
